Please note, I am more than happy to install the bot for you. Just provide me with the VPS details and I will connect and set the bot up. Otherwise, you are welcome to do it yourself and ask if there are any questions/issues.

As requested: https://www.youtube.com/watch?v=OFearuMjI4s

Installation Guide

1. Install node.js

    a. Windows - https://nodejs.org/en/download/

    b. Ubuntu –
        i.   **curl -fsSL https://deb.nodesource.com/setup_current.x | sudo -E bash -**
        ii. **sudo apt-get install -y nodejs**

2. Install NPM

    a. Windows - https://www.npmjs.com/get-npm

    b. Ubuntu - **sudo apt install npm**

3. Download the Discord bot from the Fiverr delivery and unzip.
    a. Windows – right click and unzip.
    b. Ubuntu – unzip on windows and drag and drop using filezilla or equivalent.

4. Open powershell. You can do this by opening the bots folder in file explorer, holding shift + right click on the white area

    and clicking open powershell here.

5. Enter **npm install discord.js chalk**

6. Edit the config.json file (You need to install notepad++ to do this).
    a. Token should be your bots token (see next page).
    b. Guild1 should be the server ID of where the filtered messages are sent.
7. Enter **node index.js** – If on ubuntu, do the following:
    a. **npm install -g pm2**
    b. **pm2 start index.js** (ensure you are in the bots directory)

8. Your bot is now working!

Bot token & adding it to your server

● To get your bots token, you need to use the discord developer portal.
● I recommend using this guide - https://www.writebots.com/discord-bot-token/
